*Seedling vigor is a visual estimate of percent ground cover, plant height, etc. that reflects the relative speed entry develops mature sod. Rated 1-9: 9 = complete ground cover.

**Genetic color reflects the inherent color of the genotype, not chlorosis or browning caused by mower damage, disease, etc. Taken when grass is not under stress. Rated 1-9: 9 = dark green.

*** Fall - Percent living ground cover is used to express massive localized damage caused by disease, insects, weeds, drought, poor establishment, etc.

Rated 0-100: 100 = complete ground cover of the originally planted species.

****Rust is a visual rating, taken in the fall, that reflects the relative susceptibility of the genotype to pathogen *Puccinia spp.* Rated 1-9: 9 = resistant.

*****Quality is a visual estimate integrating all factors of turfgrass quality (color, density, leaf texture, disease resistance, etc.). Rated 1-9: 9 = excellent.

*****Spring greenup rated 1-9: 9 = very green

*****Leaf texture rate 1-9: 9 = fine.
